

# **About** US

is a wholly black-owned, private company with 100% female ownership.

TK research was formed in 2016 by individuals who have gained numerous experiences working in the field of Monitoring & Evaluation, data collection, data capturing, data analysis, report writing, dissemination of findings as well as capacity building since 2008.

TK defines itself as a continuity company that builds upon evidence to strengthen and enhance solutions through a lens of health care disruption, tempered by human intuition and machine learning. Our current work and portfolio of projects speak to the 2030 Agenda for Sustainable Development.

The goals cite equity, empowerment and engagement of stakeholders together with strengthening of data as core drivers of transformation in the next development agenda. TK's logical, participatory approaches result in user-informed and driven product development that results in adoption and ownership. Focal areas include infectious disease prevention and education, human migration and health, Orphans and Vulnerable Children, Early Childhood Development, mental health, and automated monitoring and evaluation.

TK approaches each challenge to strengthen systems, build local capacity, accelerate analytics, enable reporting in real time, and integrate social and cultural issues into broader contexts.

As specialists in data analysis our expertise includes predictive analysis using techniques from data mining, statistics, modelling, machine learning and artificial intelligence to analyse current data to make predictions about the future. We also convert captured data into useable data files through relevant softwares such as SPSS, Excel, STATA, PowerBI, Nvivo, Atlas-ti, amongst other programmes

#### See our website: www.tkresearch.org

TK Research have successfully completed a number of large-scale evaluation and data capturing projects for various local and international organisations including:

Human Sciences Research Council, International Organisation for Migration, Tulane University Highly Vulnerable Children Research Center, among others.

## **Our Vision**

To remain a leading research institute in developing skills of youth in Monitoring and Evaluation, Data Capturing, Data analysis as well as job creation in South Africa, the SADC region and beyond.

## **Our Mission**

To empower the youth and bring change within communities in South Africa through provision of high quality social economic research and capacity building support services to government department, Non-Profit Organisations, International AID agencies and private companies.

### **Our Objectives**

- To create and deliver value-adding competitive products and services to our clients, shareholders and staff.
- To build and create a professional and entrepreneurial team that will guide TK managed growth.
- To develop our presence in the social-economic and market research and consulting industries as the undisputed masters at positioning and strategy formulation, through the effective use of scientific research intelligence disciplines, customer-centric research methods and unlocking the "creative capital" within organisations.

#### **Our Services**

Our team consists of highly-skilled, multi-lingual, committed consultants with extensive knowledge and experience in a wide range of research methodologies. We provide services to our clients at competitive rates, without compromising quality. We have the institutional capacity and technical expertise to conduct:

- Qualitative and Quantitative research
- Research design
  - longitudinal
  - cross-sectional
  - case studies
- Market research
- Data Capturing
- Client satisfaction surveys
- Online survey

- Monitoring and Evaluation
  - Baseline Evaluation
    - Mid-term Evaluation
    - End-line Evaluation
- Public and Social development management
- Capacity-building research in the field of public health and HIV/AIDs
- Poverty Alleviation programmes
  Situational and impact assessment studies.
